The authors have done wonderful work and their work must be published. However, some suggestions are here:

Authors should present an abbreviation list for different terminologies used during the paper. Problem statement should be very clear. There should be a separate table for data sources. It would make readers to easily understand about data sources. In material and methods, there should be one paragraph for AHP. Why AHP method is chosen over other methods of MCDA? Latest references must be added in the paper.

Overall paper is good and I recommend it to be published.
