Topic: Revitalizing Key Conditions and Integrated Watershed Management Approach to Sustain Water Availability and Agriculture in Semi-Arid Regions

General comments

The article presents a very important topic that could lead to sustainability of water and agriculture in Semi-Arid Regions which is commendable. The article however lacks key issues in the abstract and Recommendation sections as follows.

Abstract

The research summary is well stated in the abstract. However the abstract is:-

- Lacking a statement on what the study is all about. This statement should be written before stating the purpose of the study which is also missing
- Lacking the method used to collect information
- Missing the explanation on how the analysis of results was done
- There is also need to include recommendations of the study in the abstract e.g based on these findings, the study recommends
- The place where the study took place is also missing.

Recommendations

The study is lacking recommendation. This could be considered and included.

Verdict: I recommend the article for publication after attending to the above comments
