Potential competing interests: The author(s) declared that no potential competing interests exist.

Authors have compiled and reviewed very important and interesting aspects of evaluating and ascertaining the probable link between gastrointestinal microbiome and various ocular conditions like recurrent Uveitis, Glaucoma, Macular degenerations ,OSD . This review article has highlighted possible mechanism of immunological reactions of microbiome and its correlation with ocular pathology . Suggested hypothesis of a deranged gut barrier may trigger altered blood retinal barrier is worth analyzing .It Reviewer feels that further research on this aspect of relations between gastrointestinal microbiome and ocular /retinal blood barrier deserve further research. Considering role of gastrointestinal microbiome leakage into blood and further invasion into ocular blood circulation logically involve dietary modifications, probiotics, antibiotics, and FMT as an adjuvant therapy in ocular diseases . Reviewer compliments and congratulates authors for this excellent review article.
