Potential competing interests: No potential competing interests to declare.

Very interesting paper.

In the abstract: You should put also the Oral toxicity test that was performed in mice.

In Experimental animals: The sex of the mice wasn't cited

In the acute toxicity: the MP juice at different concentrations was administered once? or per 10 days as it was in rats?

It is also missing the conditions on which these animals were maintained (temperature, umidity, photoperiod, air exhaustion, etc)
