**Potential competing interests:** No potential competing interests to declare.

Paper is well organized. The authors have brought out the importance of the usage of cloud computing for an educational scenario. AWS cloud services is setup as a model for this purpose. A real case scenario of a set of students and their performances can be well illustrated.

More emphasis on the security aspects can be still elaborated with respect to federated access and identity management in cloud environments.

overall, the paper is recommended to be published with these minor corrections.
