

Review of: "Evaluation of Reliability and Financial Feasibility of Various EV Charging Station Layouts"

Mohammad Noor Hidayat

Potential competing interests: No potential competing interests to declare.

Abstract:

- It should explain the current development of EV charging stations
- It should explain the different EV charging station configurations used in this research.
- The findings should be summarized in quantitative statements rather than qualitative ones.

Introduction:

- OK

Methodology:

- There should be a flowchart or a diagram to follow
- There should be a scientific approach for the methodology, such as mathematical equations, programming languages, or other forms. For example, how to calculate the voltage stability index (VSI)?
- There should be a Financial Feasibility Analysis in the paper.

Significance of results:

- The results of this research should be provided in data forms, such as tables or graphs.
- The data should go through an analysis process.

Conclusion:

- The conclusion should consist of a summary of data analysis.
