Manuscript Title: **Effect of yogurt on fluoride induced toxicity in rabbits**

General comment

This study investigated the effect of yogurt on fluoride induced toxicity in rabbits. The idea is good, the study is reasonably designed. and the results are presented understandably. However, professional English editing is required. Furthermore, the introduction section requires reorganization and lack knowledge gap, no implications of the study, needs more and more discussion. The authors are encouraged to read carefully through the manuscript and correct these errors.

Eventually, I recommend this paper be accepted after major revision.

## II - Errors and suggestions for the manuscript

1. **Abstract:** Highlight the aim and the methodology of the research in the abstract. Re-organize the quantitative data in the abstract. Most of the abstract statements are explicit.
2. **Materials and methods:** \*Experimental animals and adaptation\* Are the authors sure that each of the twenty-eight adult male and female rabbits weigh 1kg B.W. or the 1kg is the average body weight? \*Bacteria of interest culturing are not seen in the manuscript. \*No control experiment is found in the manuscript.
3. **Introduction:** Authors should give a clear knowledge gap to fill in this research
4. **Results:** Authors should select different graphical representation to showcase their results. The bar graph is too many and not encouraging
5. **Discussion:** The discussion lack implications of the study. Adequate discussion is needed.
6. One final tip: always proofread a manuscript before submitting it.
