Review of: "Candida, the Gut Microbiome, and the Epidemic Levels of Cancer and Autoimmune Disease in Young Women, Dementia, and Obesity"

Pierre Le Bars¹

1. Université de Nantes, France

The article is a review of the literature, particularly concerning the influence of the growth of the candidal population on several pathologies in women. Several reservations must be made. Most of the studies mentioned are taken from in vitro research. The scenarios presented remain hypothetical. The article should specify the candidal population concerned, and also specify how to identify and quantify Candida as a pathobiont. The article deals with the subject without going into details; it remains general.
