Congratulations on the search. The work has been well elaborated and well written, presents clarity in the organization.

However, some points could be better clarified:

- 1) Add in the title "... ethanolic extract of the leaves of Olea africana...."
- 2) The experimental model using Artemia salina cannot be considered an animal model. Need to change this statement in the background
- 3) Add the geographic coordinates of the location where the plant was collect, the name of person responsible for the botanical identification and the number voucher deposited at the Herbarium.
- 4) Specify whether 100% ethanol or its grades were used for the extract.
- 5) Add the percentage of extract yield.
- 6) What were the parameters used for the concentrations in the acute toxicity test?

Best Regards
