

# Review of: "Effect of Supplementation with *Moringa oleifera* on Antioxidant and Oxidative Stress Biomarkers of Infertile Women: A Pilot Open-Label Randomized Clinical Trial"

Ila Shukla

Potential competing interests: No potential competing interests to declare.

The review for the given article is as follows:

The paper outlines a well-organized research study with encouraging findings, indicating that supplementing with *Moringa oleifera* might potentially benefit antioxidant and oxidative stress indicators in infertile women.

1. But enhancing the research and improving study techniques might bolster the data supporting the utilisation of *Moringa oleifera* in managing infertility.
2. Addressing the high loss to follow-up reported in the study by implementing strategies to minimize participant attrition would strengthen the validity of the results. Although the present study is sufficient to proceed, the given study can be further elaborated for better understanding.
3. The study could benefit from a larger sample size to enhance the generalizability of the findings and increase statistical power.
