Soluble Receptor Tyrosine-Protein Kinase erbB-2

National Cancer Institute

Source

National Cancer Institute. <u>Soluble Receptor Tyrosine-Protein Kinase erbB-2</u>. NCI Thesaurus. Code C18435.

Soluble receptor tyrosine-protein kinase erbB-2 is encoded by the human ERBB2 gene. This protein may be involved in binding to receptor tyrosine-protein kinase erbB-2, which leads to disruption of dimer formation, reduced receptor phosphorylation, and inhibition of cell growth.
