Complete androgen insensitivity syndrome

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Complete androgen insensitivity syndrome. ORPHA:99429

Complete androgen insensitivity syndrome (CAIS) is a form of androgen insensitivity syndrome (AIS; see this term), a disorder of sex development (DSD), characterized by the presence of female external genitalia in a 46,XY individual with normal testis development but undescended testes and unresponsiveness to age-appropriate levels of androgens.
