# Review of: "Electric Vehicle Fleet Penetration and Air Pollution Mortality in Europe"

Martin Koning<sup>1</sup>

1. Université Gustave Eiffel, Champs-sur-Marne, France

The topic is worthy of investigation. The empirical analysis lacks, however, robust evidence. In order to improve it, several possibilities exist: work with subnational data or non-European countries, show correlations not only between EV penetration and mortality but also with other co-factors (i.e., those mentioned in the discussion), and use a longer time frame. The wording could also be refined since, sometimes, the author seems to present a causal link and not a single correlation. Anyway, interesting job, good luck!
