

Review of: "Case Report: Pott's Puffy Tumor, But Without The Tumor"

Sumit Thakar

Potential competing interests: The author(s) declared that no potential competing interests exist.

The authors describe a case of Potts puffy tumour secondary to trauma/ sinusitis. Though the case was managed well, there are lots of issues with the manuscript:

1. Lack of novelty (though the title makes it appear otherwise)
2. Poorly drafted and edited manuscript; needs extensive editing for grammar and style
3. No differential diagnoses provided
4. References are not up to date
5. Images provided are not reader friendly. Appropriate images should be selected and labelled
6. Overall, the discussion is rather lacklustre
