Potential competing interests: No potential competing interests to declare.

I have suggestions that:

1. Figure 1 can be re-plotted clearly to be more understandable for the reader.
2. Figure 3 should be plotted on one figure that shows clearly comparable results.
3. The control samples are used in an open circuit—what are the aims of it?
4. The experiment was done at room temperature around 1 PM. Is that fully controlled for 50 days?
5. The graphical abstract is needed to completely explain the study.
