

# Review of: "Assessing the Impact of a Group Intervention on the Mental Well-being of Undergraduate Healthcare Students"

Richi Simon

Potential competing interests: No potential competing interests to declare.

Parenthetical in-text citations need corrections

If the objectives/research questions/hypotheses could be placed explicitly, it will add on to the readability of the article.

Conceptually, the formulation of experimental group and control group should be matched on different parameters (here, mental well-being)

Figure 1 – endline scores for both intervention and control groups have increased. The explanation regarding the increased scores in control group is missing.
