Dear editor

The authors have presented an interesting paper on the quantum origins of gravity. Einstein's field equation is solved numerically. The results are important but I have some remarks and questions:

- 1-The authors must indicate more details on the numerical method.
- 2-The authors must justify the parameters used in relation with experimental work.
- 3-This article does not present any comparison with experimental works.
- 4- The authors must change the title of table 4.
- 5- The article must have other figures to better explain.
