Potential competing interests: No potential competing interests to declare.

- Please revise the article according to the STROBE statement.
- The sampling method should be explained in detail.
- Statistical analysis plans and methods may need to be revised. Statistical analysis should begin with univariable analysis, followed by multivariable analysis. Important confounders should be considered. If the authors applied cluster random sampling, relevant statistical methods should be used.
- Tables should be designed in standard formats for medical journals. Table 2 isn't easily understandable.
