Monoclonal Antibody muj591

National Cancer Institute

Source

National Cancer Institute. *Monoclonal Antibody muj591*. NCI Thesaurus. Code C2476.

A murine IgG monoclonal antibody against the external domain of the prostate-specific membrane antigen (PSMA), overexpressed in the malignant prostate and its metastases. Although PSMA is not a biomarker of disease progression, over-expression indicates an aggressive phenotype of the prostate cancer. Radiolabelled MoAb muj591 may be used in prostate cancer diagnosis and therapy.
