Potential competing interests: No potential competing interests to declare.

The research covers very much relevant and important topic. WEEE recycling is a significant problem globally and potential solutions and change in behavior are crucial to overcome it. Overall the paper is well structured, although certain improvements are required for its successful publication. The reviewer also recommends to revise the limitations and maybe emphasize future research - as two points to consider. Main changes advised:

- revision of language, formatting and stylistic issues.
- improvement of the methodology.
- increasing number of references.
- supplementation of the paper with questionnaire (in Annex) or at least providing more details on it.
