# Malignant Mediastinal Neoplasm

National Cancer Institute

## Source

*National Cancer Institute. Malignant Mediastinal Neoplasm. NCI Thesaurus. Code C3549.*

A primary or metastatic malignant neoplasm affecting the mediastinum. Representative examples of primary malignant mediastinal neoplasms include malignant germ cell tumors, malignant mesenchymal tumors, lymphomas, and malignant peripheral nerve sheath tumors. A representative example of metastatic malignant neoplasm to the mediastinum is the metastatic carcinoma to the mediastinum from another anatomic site.
