Potential competing interests: No potential competing interests to declare.

Abstract needs to be well-written as it is the heart of any article, but it is very brief here. It needs to be updated and descriptive.

Authors should add more references, specifically from more recent years.

Authors should add a more complete theoretical analysis of encryption and a comparative analysis that shows how their work is better than already available approaches.

Literature comparison needs to be mentioned, i.e., the method and design of the present research in comparison to the existing methods.

As a summary, a good concept is written, but the paper still lacks a detailed description of methods, overall results, discussion, and comparative analysis to give a final look at the present technology offered.

Can be accepted after all these corrections.
