Review of: "Asymptotically Periodic and Bifurcation Points in Fractional Difference Maps"

Cheng Luo¹

1. Nanjing University of Finance and Economics, Nanjing, China

From the manuscript, the structure and logic are clear. But I have some confusion as follows:

(1) I am confused that the author mentioned fractional difference equations and fractional order mappings. In my perception, aren't they the same object? What is the difference between them? In addition, I noticed the difference in equation (6).

(2) I have doubts about the convergence proof of (24); please check again. If it is effective, I suggest providing detailed information in the appendix.
