Potential competing interests: No potential competing interests to declare.

First, strictly speaking, this paper does not belong to a research paper from the perspective of research paradigm. It is only a simple description of the background, theoretical basis, etc., and lacks research methods.

Second, the paper does not propose a business continuity management framework or build a business continuity mathematical model, and lacks theoretical derivation to support its own point of view.

Thirdly, the uncertainty analysis in this paper only provides a superficial analysis of some external factors and offers some suggestions, with limited academic contribution. Moreover, uncertainties include changes in the costs of production, ordering, sales, recycling, and others faced by the company, and these factors have not been considered.

Fourth, the abstract should provide a brief description of the problem, method result, and contribution. The introduction does not sufficiently reflect the current research status of business continuity management both domestically and internationally.

Fifth, some forms of expression such as tables should follow academic norms.
