Benign Ovarian Seromucinous Tumor

National Cancer Institute

Source

National Cancer Institute. *Benign Ovarian Seromucinous Tumor*. NCI Thesaurus. Code C7282.

A non-metastasizing mixed epithelial neoplasm that arises from the ovary. It is characterized by the presence of more than one epithelial cell type, most often serous and endocervical-type mucinous. This category includes seromucinous cystadenoma and seromucinous adenofibroma.
