Columnar Cell Hyperplasia of the Breast with Atypia

National Cancer Institute

Source

National Cancer Institute. *Columnar Cell Hyperplasia of the Breast with Atypia*. NCI Thesaurus. Code C54184.

A columnar cell lesion characterized by the presence of enlarged terminal ductal lobular units with dilated acini. The acini are lined by more than two layers of columnar epithelial cells. Cytologic atypia is present. Prominent apical cytoplasmic snouts and intraluminal secretions are also present.
