The review named "Cytobiological Alterations Induced by Celecoxib as an Anticancer Agent for Breast and Metastatic Breast Cancer" is combined with critical information, but I have some queries related to the manuscript.

1. As per the title, the review should be focused on celecoxib, but more than 70% of the content is covered with cancer, role, and mechanism. In the introduction section, the celecoxib-based literature and the current scenario of the drug should be included.
2. Include the cardiac toxicity related to celecoxib too.
3. Add the drug approval status.
4. Add recent references too.
