Review of: "Visualization of Home Security Sensor System Based on IoT Server"

Ari Setiawan

The topic of visualization of home security is interested.

However there are some issues to improve the writing matter in this paper.

1. Some of words are still Indonesian language, such as the sub title "2.1. Mikrokontroler" should written "microcontroller". The Figure 8, is still in Bahasa Indonesia, as well as figure 10 etc.
2. There are Reference and Other References in this paper. What should this references contribute in this paper. It must be stated that those references are cited and written in the paper.
3. Paper writing needs improvement.

Some of the research content need to improve, such as:

1. To design a product or prototype, it should need some explanations, for the microcontroller selection, why the author requires Arduino The other components selection also need explanations.
2. The design of the prototype requires AC-DC Converter for the power supply. What is "PLN" means. Is that necessary to have battery as the power supply back-up?
3. Visualization of dashboard in figure 9 to 13 is not suitable for handphone screen. It should decided if the prototype is still running on the computer screen.
4.
