First of all, congratulations on your great work. The paper is correct overall but I would make a couple of simple suggestions:

1. If possible, I think it would be interesting to add the epidemiological measure (incidence, prevalence) utilized to assess the increase in disease burden in each study to Table 2.
2. Considering the importance in systematic reviews of analyzing the quality of studies, it would be valuable to include a table with the quality assessment or, at least, provide a brief comment on the overall quality of the studies.

Best regards,

Daniel Cifo
