**Potential competing interests:** No potential competing interests to declare.

Here are some aspects the author may consider revising to enhance the text:

1. **Clarity and Structure:** The author should ensure that the text is well-organized and follows a clear structure. This includes providing a comprehensive introduction, a detailed methodology section, a thorough presentation of results, and a robust conclusion.
2. **Data Presentation:** The author should consider presenting the data in a more organized and visually appealing manner. This could involve using tables, graphs, and charts to effectively communicate the findings and analysis.
3. **In-depth Analysis:** The author should aim to provide a more in-depth analysis of the results, including a discussion of the implications of the findings, potential limitations, and areas for further research.
4. **Integration of Literature:** To enhance the scholarly quality of the text, the author should consider integrating relevant literature to support the methodology and findings. This could involve referencing established theories, prior research, and best practices in the field of non-revenue water reduction and GIS applications.

By addressing these points, the author can enhance the overall quality and impact of the text.
