Dear Authors,

Reading the article, I conclude that it can provide important information to ethnobotanists, especially in the area of distribution of the plant.

1. The concept and context of the subject are appropriate.
2. The introduction is clear and provides sufficient information describing the plant.
3. The Results and Methods sections are clear.
4. A few recommendations to accept the publication of this article:
 - Add one or two pictures in the introduction section of the studied plant
 - Add the percentages in figures 2, 3, 4, 5, and the frequencies in figure 6.

Best regards,
