Potential competing interests: No potential competing interests to declare.

1. Remove the whole of paragraph one
2. Write in full the first time you are using an abbreviation
3. The introduction and the literature review can be put under one heading as background and be precise.
4. Put references on information in your introduction.
5. Only objective number one is feasible with a cross-sectional study.
6. Do not use I; use the phrase "principal investigator."
7. Explain in the manuscript how you came up with the sample size for the study.
8. No need to repeat results shown on graphs, maybe just a few highlights.
9. After results, you discuss your results under the title "Discussion" with reference to other authors.
10. When discussing your results, do not repeat the results in detail.
11. The conclusion should just be a few lines putting down your deductions from the study.
12. Recommendations can be put under "Discussion," not under "Conclusion."
13. Well done for having such a relevant research objective.
