Potential competing interests: No potential competing interests to declare.

I completely agree with several of the assessments of other reviewers of this article that finding new versions of Taylor's double series development can be interesting. However, I also emphasise the fact that this new version of such development may be entirely equivalent to the classic one, but with different expressions of the coefficients involved. In addition, the results shown in the examples also indicate that both developments actually coincide. Otherwise, the authors should rather focus on the possible differences and/or improvements of this new version compared to the classic one. Apart from this, some syntactic errors of some English expressions should also be corrected.
