Dear all

Thanks for the opportunity to be a paper reviewer.

The topic Tourists' Activities and their Impacts on Chinhoyi Caves Heritage Site, Zimbabwe is very current and interesting. I will make a few suggestions to improve the work.

Primarily, there is a lack of cartographic and graphic attachments. I suggest inserting a map with the location of the researched area and graphic attachments that follow the results of the research.

I suggest that an example of the questionnaire that was used for the interview be attached at the end of the paper. Are 15 respondents sufficient and relevant for the research?

It would be good to include information on how many monthly and yearly tourists visit the area (or I missed that information in the text).

Check the list of references well, e.g., Ateljevic is mentioned in the paper, and he is not in the list of references.

I think that the work can be published with the mentioned minor corrections, respecting the opinion of the other reviewers.
