Potential competing interests: No potential competing interests to declare.

Well-presented and written article, but review needed for grammatical and consistency errors.

Authentication of plant details is necessary.

Background section should be shortened.

Unclear data analysis; requires more details.

Lack of information on the test used for mean comparison.

Missing certain experimental data such as application dose, timing, fasting period, etc.

Inclusion of biochemical experiments on the mode of action recommended for discussion substantiation and focus.

Discussion section and conclusion can be rewritten more specifically.

Relevant plants in the discussion should be cited as supported references.
