Potential competing interests: No potential competing interests to declare.

I appreciate the work done by the authors. However, there are some points that need to be considered.

1. Please remove the informal and grammatical errors.
2. There should be a table to show the comparison of the diseases. it will ease the readers.
3. Please write the abbreviations appropriately. First time when using write the full form then use abbreviations.
4. Look at the repetitions in the whole manuscript.
5. Use the updated references.
6. Conclusions seems to be repetition of abstract.
