Superficial corneal dystrophy

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Superficial corneal dystrophy. ORPHA:98625*

The superficial corneal dystrophies refer to a group of rare genetically determined corneal dystrophies (CDs) characterized by lesions affecting the corneal epithelium and its basement membrane and the superficial corneal stroma, and variable effects on vision depending on the type of dystrophy.
