Potential competing interests: No potential competing interests to declare.

Thank you so much for allowing me to review paper

- Objective/Gap: the need for this research is not clearly stated. The main objectives of the study are not clear. The main research questions are not well developed. The introduction should start with a discussion of the scope and significance of the issue and or problem. Next, the manuscript needs a literature review that should provide the reader with a synthesis of previous work.
- Theoretical development: The paper did not discuss any theory to support arrangements. The theoretical assumptions of the research questions development are confusing and are not well justified.
- Although I think the topic raised in this paper is interesting, the paper should be improved substantively before considering a publication. First, as an empirical study, it fails to follow the standard process. Second, you'd better discuss the theoretical gap in the introduction section and make your study based on solid theoretical foundations. Third, provide sufficient information on the measurement of the critical variables, Four, discuss the potential contributions made to the literature and the implications for management before the end.

In summary, there has to be so much more clarification and elaboration that I advise setting up the paper again from scratch instead a significant revision. I hope you find my comments helpful, and I wish the author(s) the best of luck in developing this research.
