Potential competing interests: No potential competing interests to declare.

The paper is apt at this time considering the topic. However, the research gap for this study must be highlighted comprehensively. This includes the main objectives and direction. The literature review can be improved with respect to theories. The issue of the author citing his own work too many times should be addressed. Also, the methodologies, particularly the statistics, should be well defined and stated. Furthermore, more results can be derived from more analyses of the data.
