Potential competing interests: No potential competing interests to declare.

1. The figure and table captions should be more informative, and I suggest the author added more tables.
 2. What's the innovation of this article? The author should explain.
 3. English should be improved.
 4. In the experimental section, the analysis of the experimental curve is too brief; please conduct an in-depth analysis.
- In short, in its current form, the paper is not suitable for acceptance. The paper needs rewriting by addressing the above-mentioned comments.
