

Review of: "Objectivity and Honesty in Science: The case of Light Interference Phenomena"

Joseph Ivin Thomas

Potential competing interests: No potential competing interests to declare.

While the bibliography is extensive, it remains incomplete because of the notable absence of certain very important references that this manuscript could have surely benefited from. I make my list of books and their authors below:

- 1. The rise and fall of wave theory of light - Jed Z Buchwald*
- 2. Waves and grains - Mark Silverman*
- 3. A history of optics - Olivier Darrigol*
- 4. History of the principle of interference of light - Nahum Kipnis*
- 5. The last man who knew everything - Andrew Robinson*
- 6. Scientific memoirs of Huygens, Young, Fresnel - the wave theory of light - Henry Crew*
