Potential competing interests: No potential competing interests to declare.

General review: A good review paper; however, there is some room for improvement, such as:

- a) Novelty has not been clearly addressed. This is because fly ash is a common material for research.
- b) The review paper does not include an analysis of the advantages and disadvantages of using fly ash.

Format: Some units need to be corrected, for example, 1.913 g/cm³ and 290.68 kN/m².

Literature Review: The literature has covered the use of fly ash in pavement and soil layers in the form of paragraphs, but it is also recommended to make a summary table about the use of fly ash in the form of a summary table as well.
