Dear Authors

The work has a useful informations for the scientific field related to dentists. For more representative, constructive and scientifically making of this manuscript, I suggest the followings:

- Including clonidine in the title instead of alpha2 agonist.
- Provide more cases related to this pardigm.
- Discuss the major issue of anesthesia which is the cardiopulmonary depression and the role of clonidine.
- Provide a tool for measuring analgesia caused by the concurrently administered drugs.

Kind regards
