**Potential competing interests:** No potential competing interests to declare.

This work is interesting. However, I have the following observations for the author:

- a. The novelty of the work is not clearly stated and justified. This should be done.
- b. Figures 3, 4, and 5 are indicated as plots of errors. How can the exact solution have errors as plotted in the figures? This should be explained or corrected.
- c. Proofread and correct the grammatical errors in the work.
