Potential competing interests: No potential competing interests to declare.

1.-Why do the authors use old references (2003, 2006 and 2012)? I suggest you replace it with more current ones from 2016 onwards.

2.-I agree that the region is favorable because of the climate, but what role does the population play in the plant? It is not very clear for postgraduate university readers when they consult the article, I suggest they be more precise.

3. - I suggest checking the English wording, I advise that it be British.

4.-I suggest reviewing the Thermal and Performance equations.
