

# Review of: "Artificial Intelligence and Digital Technologies in the Future Education"

Giovanni Delnevo<sup>1</sup>

<sup>1</sup> University of Bologna

**Potential competing interests:** No potential competing interests to declare.

The paper presents a discussion on the role of AI in education. The topic is interesting but I have several notes that could be addressed.

Major notes:

- The author mainly presents an excursus of AI story without too much focus on the education field
- The author should discuss the recent trend, e.g., LLM models
- The paper should include also more recent studies
- The paper lacks of an experimental part

Minor notes:

- Figures from other works have to contain the relative reference in the caption
- The arrows in Figure 3 should be made uniform

A proofread is needed to correct errors and typos:

- "Thepaper discusses the" -> "The paper discusses the"
- "Namely, the role of computers isinvestigated" -> "Namely, the role of computers is investigated"
- "disadvantages of e-learningwith respect to" -> "disadvantages of e-learning with respect to"
