Belladonna/Phenobarbital/Ergotamine

National Cancer Institute

Source

National Cancer Institute. *Belladonna/Phenobarbital/Ergotamine*. NCI Thesaurus. Code C28861.

Used to relieve stomach/intestinal symptoms, menopause (hot flashes, sweats, restlessness, and insomnia), headaches, and tachycardia, Belladonna Phenobarbital Ergotamine is a combination of an Atropa belladonna alkaloid, a Claviceps purpurea (Ergotamine) alkaloid, and a synthetic barbiturate. Parasympathomimetic Belladonna decreases secretion, smooth muscle stimulant Ergotamine blocks alpha-adrenergic activity, and sedative Phenobarbital induces sleep. (NCI04)
