Potential competing interests: No potential competing interests to declare.

The manuscript is timely and well structured. The title and objectives are very nice and timely. The author/s used very robust statistical model. The writing flow of the manuscript was well done. The author/s tried to put nice abstract that summarizes the manuscript clearly.

minor comments:

1. the table titles should be on the top of the table and in the same page where the table placed.
2. The figures titles should be placed immediately under the entiire figures in the same pages with figures
3. The figure should not be placed in conclusion part. Conclusion should only generalizes about the results of the all articles but do not need graphical explanation and exploration. All the graphs placed in conclusion part of the maunsript should be taken into under result part.
4. The author should put the future work direction of their manuscript.
