Potential competing interests: No potential competing interests to declare.

It is a good study that focusing on integrating TBLT to enhance ESP learners' motivation. However, there are a few issues that the authors need to address to improve this article.

1. **Abstract:** Although the authors highlight the purpose and the instruments used for the study, the authors need to address how the data was analysed. The authors indicate that TBLT would improve learners' attitudes. However, the title is about learners' motivation. Besides, the implication of the study needs to be clearly explained.
2. **Introduction:** The introduction is well written. However, it is suggested to explain motivation and TBLT in learning ESP in detail. This will give a better connection to the title of the study.
3. **Literature review:** The subheading on need analysis is very comprehensive. However, authors should also explain other elements such as learning theory, motivation, TBLT, and conceptual framework in detail.
4. **Data gathering instrument:** It requires rigorous amendment. The authors should highlight the sampling method, data analysis, inclusion and exclusion criteria, and the validity and reliability of the questionnaires.
5. **Findings and discussion:** The author has presented clearly on the results. However, presenting the findings and discussion based on the research questions is suggested.
6. **Conclusion:** Authors should include implications and recommendations in this section
7. **Others:** The article requires proofreading and editing. The authors should also check on the citations and references.
