# LNH-92 Regimen

National Cancer Institute

## Source

National Cancer Institute. *LNH-92 Regimen*. NCI Thesaurus. Code C67211.

A regimen based on the principles of a leukemia-type regimen that is used for the treatment of disseminated childhood anaplastic large cell lymphoma (ALCL). The treatment plan consists of an induction phase, a consolidation phase and a final maintenance phase; the duration of the entire regimen is 24 months, regardless of the initial stage.
